

# **CHAPTER- IV**

# ANALYSIS AND STATEMENTS OF RESULTS

## 4.1 Introduction

This chapter deals with the analysis of the data. The analysis of the data was undertaken to draw logical inferences concerning the tentability of the hypotheses, Data were collected with a view to study the effect of cooperative learning method in comparison to traditional method of teaching. The whole sample was divided into groups and sub-groups in order to determine the effect of cooperative learning on experimental and control groups and on boys and girls.

This was essential to compare the effect of cooperative learning with that of methods of teaching being currently used in schools. In analysing the data exploratory methods were used to have a feel of the data. Descriptive statistics was used to describe the performance of experimental and control students in pretest and posttest achievement score. Where appropriate, inferential statistics was used to test the hypotheses stated in chapter one. The mean and the standard deviation values were calculated to describe the results of pretest scores and protest scores of cooperative students. The t-test was used to test the hypothesis relating to experimental group and control group of boys and girls. The analysed information has been presented in the following tables.

**Table 4.1**

**Breakdown of genders in experimental and control students.**

| Experimental group |      |        | Control group |      |        | Total |
|--------------------|------|--------|---------------|------|--------|-------|
| Valid N            | Male | Female | Valid N       | Male | Female |       |
| 32                 | 16   | 16     | 32            | 16   | 16     | 64    |

Missing observation No.

**Table 4.2**

**Pretest scores of experimental group (25 items)**

| <b>Gender</b> | <b>Number of correct answers</b> | <b>Valid N</b> |
|---------------|----------------------------------|----------------|
| Boys          | 62<br>(16.53%)                   | 12<br>(75%)    |
| Girls         | 98<br>(26.18%)                   | 13<br>(78.12%) |
| Total         | 160<br>(42.18%)                  | 25<br>(78.12%) |

Missing observations No.

Table 4.2 indicates that the performance of girls in pretest achievement scores {98(26.18%)} was higher than the pretest achievement score of boys{62(16.53)}.

**Table - 4.3**

**Pre-test scores of control group (25 items)**

| <b>Gender</b> | <b>Number of correct answers</b> | <b>Valid No</b> |
|---------------|----------------------------------|-----------------|
| Male          | 82<br>(21.86%)                   | 13<br>(81.25%)  |
| Female        | 84<br>(22.4%)                    | 14<br>(8700%)   |
| Total         | 166<br>(44.26%)                  | 27<br>(84.37%)  |

Missing observation No.

Table 4.3 suggests that the performance of girls was better in pretest achievement scores [84(22.4%)] than the pre-test achievement scores of boys [82(21.86%)].

**Table 4.4**

**Post test scores of experimental group (25 items)**

| <b>Gender</b> | <b>Number of correctanswers</b> | <b>Valid No</b> |
|---------------|---------------------------------|-----------------|
| Male          | 183<br>(48.8%)                  | 16<br>(100%)    |
| Female        | 290<br>(77.33%)                 | 16<br>(100%)    |
| Total         | 473<br>(59.12%)                 | 32<br>(100%)    |

Missing observation NO.

Table 4.4 performance of females in post-test achievement scores [290(77.33%)] was higher than the post test achievement scores of males {183(48..8%)}

**Table 4.5**

**Post test scores of control group (25 items)**

| <b>Gender</b> | <b>Number of correctanswers</b> | <b>Valid No</b> |
|---------------|---------------------------------|-----------------|
| Male          | 181<br>(48.26%)                 | 16<br>(100%)    |
| Female        | 151<br>(40.26%)                 | 16<br>(100%)    |
| Total         | 332<br>(44.26%)                 | 32<br>(100%)    |

Missing observation NO.

Table 4.5 demonstrates that the performance of Females [151(40.26%)] is lower than the males {181(48.26%)} in post test achievement scores.

**Table 4.6**

**Mean and standard deviation values in pre test achievement scores (Experimental group only).**

| <b>Gender</b> | <b>Valid No</b> | <b>Mean</b> | <b>SD</b> |
|---------------|-----------------|-------------|-----------|
| Boys          | 16              | 3.88        | 2.90      |
| Girls         | 16              | 6.13        | 3.53      |
| Combined man  | 32              | 10.10       |           |

Table 4.2 indicates that the performance of girls in pretest achievement scores [98(26.18%)] was higher than the pretest achievement score of boys [62(16.53%)].

**Table 4.7**

**Mean and standard deviation values in pretest achievement scores (Control group).**

| <b>Gender</b> | <b>Valid No</b> | <b>Mean</b> | <b>SD</b> |
|---------------|-----------------|-------------|-----------|
| Boys          | 16              | 5.12        | 3.99      |
| Girls         | 16              | 5.25        | 3.74      |
| Total         | 32              | 5.18        | 3.87      |

Table 4.7 shows that the mean scores of girls (M=5.25) was slightly higher than the mean scores of boys (M=5.12) suggesting that their was not much difference in the performance of girls and boys of control group in the pre-test achievement scores .

**Table 4.8**

**Mean and standard deviation values of post- test achievement scores (Experimental group only )**

| <b>Gender</b> | <b>Valid No</b> | <b>Mean</b> | <b>SD</b> |
|---------------|-----------------|-------------|-----------|
| Boys          | 16              | 11.43       | 8.98      |
| Girls         | 16              | 14.78       | 10.87     |
| Total         | 32              | 14.78       | 10.41     |

Table 4.8 indicates that the mean scores of girls (M=18.12) was higher than the mean scores of boys (M=11.43) in post test achievement scores.

**Table 4.9**

**Mean and standard deviation values of post test achievement scores (control group only)**

| <b>Genden</b> | <b>Valid N</b> | <b>Mean</b> | <b>SD</b> |
|---------------|----------------|-------------|-----------|
| Boys          | 16             | 11.31       | 3.94      |
| Girls         | 16             | 9.7         | 3.77      |

Table 4.9 also suggests that the performance of girls (M=18.12) was better than boys (M=11.31) in their post test achievements scores.

## HYPOTHESES TESTING

In the following tables the hypotheses relating to experimental group and control group of boys and girls were tested.

**Table 4.10**

**Test of hypotheses relating to effect of cooperative learning**

| Group        | Valid N | Mean | SD   | Tvalue | df | sig |
|--------------|---------|------|------|--------|----|-----|
| Experimental | 32      | 10   | 4.4  | 4.86   | 62 | .01 |
| Control      | 32      | 5.2  | 2.78 |        |    |     |

Table 4.10 clearly indicates that the obtained t-value 4.86 is more than tabulated t-value 2.66 with 62 degree of freedom is significant at 0.01 level. The P value (0.01) shown in the table is less than 0.05 therefore the null hypothesis ( $H_0$ ) cooperative learning approach and traditional teaching methods have the same effect on the learning of students is strongly rejected in favour of alternative hypothesis ( $H_1$ ). cooperative learning and traditional teaching methods have different effect on the learning of students.

**Table . 4.11**

**Test of hypothesis on learning of boys and girls of experimental group**

| <b>Gender</b> | <b>Valid N</b> | <b>Mean</b> | <b>SD</b> | <b>T-Value</b> | <b>df</b> |
|---------------|----------------|-------------|-----------|----------------|-----------|
| Boys          | 16             | 4.3         | 2.65      | 1.10           | 30        |
| Girls         | 16             |             |           |                |           |

Table 4.11 suggests that the obtained t-value 1.10 is less than tabulated t value 2.04 with 30 degrees of freedom is not significant at 0.05 level. The hypotheses was not rejected in favour of alternative hypothesis suggesting that their is no significant difference between boys and girls while learning through cooperative approach.

Hence cooperative learning and traditional teaching methods have different effect upon the learning of students and the gender differences have no effect on the learning of students.
