DECLARATION

I do hereby declare that this study entitled "RELATIONSHIP BETWEEN SOCIO-ECONOMIC STATUS AND EDUCATIONAL ASPIRATION AMONG HIGHER SECONDARY SCHOOL STUDENTS - A STUDY" has been undertaken by me in partial fulfillment of the requirement for the degree of Master of Education.

I have completed this study under the guidance of Dr. B. Ramesh Babu, Professor of Education, Department of Education, Regional Institute of Education Bhopal.

I further declare that this dissertation has not been submitted earlier by me or others for any degree either in the Barkatullah University, or any other University.

Date: 12 5 2, j Y

Place: Bhopal

CERTIFICATE

This is to certify that the contents of this dissertation entitled "RELATIONSHIP BETWEEN SOCIO-ECONOMIC STATUS AND EDUCATIONAL ASPIRATION AMONG HIGHER SECONDARY SCHOOL STUDENTS - A STUDY", is the research work of Sarita Soy (M. Ed. Student of session of 2013-14) and carried out under my supervision at the Regional institution of Education, Bhopal (NCERT) for partial fulfillment of degree of Master of Education of Barkatullah University, Bhopal.

I fut her certify that the work has not been submitted either partly or fully to any other university or institution for the award of any degree.

Plac: Bhopal

Date: t 1 . D.III-

Bhopal

ACKNOWLEDGMENT

I would like to express my deep sense of gratitude to my guide Dr. B. Ramesh Babu, Professor of Education, Department of Education (R I E, Bhopal) for his constant encouragement, kind support and invaluable guidance to carry out the work presented in this dissertation. During this dissertation work, I have been immensely benefited from his encouragement, guidance and constructive criticism.

1 am indebted to prof. H.K. Senapathy, Principal for providing enough learning facilities and educational environment in the campus. I am highly thankful to Prof. K. K. Khare, Prof.KiranMathur, Dr. RatnamalaArya,Mr. AnandValrniki, Mr. Sanjay Pandagle, Dr. N. C. Ojha as well as other faculty members of R 1 E, for their advice and help for successful completion of the dissertation. I am very much thankful to all staff of library for all kinds of possible help and providing source materials towards the completion of the dissertation.

I deeply appreciate the help obtained from my all classmates as well as all those who helped me directly or indirectly in completing this dissertation.

Finally, I would like to offer my deep sense of gratitude to my husband Mr. AmritSamad and my daughter KhushiSamad and my parents and in laws for their constant encouragement during the course of my work.

Sarita Soy

CHAPTERI INTRODUCTION

CHAPTER 1 INTRODUCTION

11 INTRODUCTION

In any society, the education plays important role for the development of human resources. Education is a process and kind of activity in relation to human beings. It is a continuous effort to develop all capacities of the student.

Individuals will have aspiration, all stages of life people try for self enhancement. The aspiration during student period influences their behavior.

The aspiration level of an individual is an important motivating factor. It is a frame a reference involving self esteem or alternatively experiences, that is the feeling of failure or success.'Level of Aspiration' is a psychological construct which reflects a cognitive type of motivation of the individual. Frank defines it in terms of the level of future perfomlance in a familiar task which an individual, knowing his level of past perfomlame in that task explicitly undertakes to reach. James Drever explains it as a frame of reference involving self-esteem or alternatively as a standard with reference to which and individual experiences, i.e., has the feeling of success or failure. Thus, the tenn level of Aspiration involves the estimation his ability (whether over, under or realistic) for his future perfonnance on the strength of his past experience (goal discrepancy), his ability and capacity, the efforts that he can make towards attaining the goal, thus set by him. The goal setting behavior as well as the process of attaining the goal are consequences of his past experience, whether failure-oriented or successoriented, level of efforts made by him in that direction, and his capacity to pursue the goal.

Social status is the position of the individual within the social relationships. It is that specific position of the individual in his relationships with other individuals by virtue of which he derives respect and prestige and whereby he exelis influence it being known by the symbols or signs and actions of the respect tendered to him (1964). The status in a group may be inherited but in modern society, the status is achieved. The economic factors play an important pmi in detenrining social status, which includes the total incol:le of the family, saving, capaeit) to collect money in emergency etc. Therefore, it is better to call this factor is socio-economic factor, rather than social or economic factor status. Above introduction stated about the socio-economic status and educational aspiration. both factor interrelated to each other and influence

student's educational aspiration on the socio-economic status of the student vice versa.

Hcnc'.! this research is titled as "RELATIONSHIP BETWEEN SOCIO-ECONOMIC STATUS AND EDUCATIONAL ASPIRATION AMONG IL/GIIER SECONDARY SC/100L SUDHNTS-A STUDY"

12 NEED OF THE STUDY

Education is a human enterprise. It is a process and kind of activity in relation to human beings. It is a continuous effort to develop all capacities of the students to control their neighboring cn, ironment and to fulfill their needs. Though education is a part of human life, it cannot help the pursuers unless they have the required amount of educational aspiration. In this, education is playing important role. But effective role of education depends on the achievement levels of all the students. Herc. researcher takes a socio-economic and educational aspiration to examine the relationship between socio-economic status and educational aspirations of the students. And to examine the effects of socio-economic status und educational aspirations among students of higher secondary school. This study was not conducted in recent tillle, so Researcher takes the study. We also find out the result in relation to socio-class status and educational aspiration among students of higher secondary school.

13 STATEMENT OF THE PROBLEM

RELATIONSHIP BETWEEN SOCIO-ECONOMIC STATIJS AND EDUCATIONAL ASPIRATION AMONG HIGHER SECONDARY SCHOOL SUDENTS – A STUDY

14 OPERATIONAL DEFINATION OF VARIABLES

Certain tenns and words have been frequent I) used in the title and report of the study. These tenns and words have been used with specialic meanings and purposes. In order to avoid possibility of any amblgulty or difficulty in their understanding, these are defined here as folio\\s.

" Educational Aspirations:-

The concept of educational a pn.ition has been explained llffcrcntl h dtffcrent educationists and psycholog1sts hut lllm: of the dctinitions are as, unth.r.

In the words of James Drever as quoted by Sharma and Gupta (1980) the tenn "Level of aspiration" is best explained as a frame of reference involving self esteem as a standard with reference to which an individual experience his sense of achievement.

According to English Dictionary (1968) Level of aspiration may be defined as "The standard by which failure or as being up to what he expects of himself."

Wood (1959) as quoted by singh (1975) has described •Level of aspiration' as the level of performance for the goal that a person or hopes to reach in a specified activity. High level of aspiration is essential for accomplishing one's aim without strong aspiration it is not possible for a person to reach his goal.

Hurlock (1967) has defined aspiration as a longing for what is above one's achievement level.

In other words aspiration means the goal an individual sets for himself in a task which has intense personal significance for him or in which his ego is fully involved.

Bisrcll (1977) defined "Educational aspiration or expectations as individuals expressed desire to continue his formal schooling beyond high school".

So, the tenn aspiration was defined as fantasy level with or without any touch of reality. The tenn level of aspiration involves the estimation of one's ability for his/her future performance on the strength of his/her past experience, his/her ability and capacity. Here researcher takes a term educational aspiration for study because educational aspiration help an individual to achieve his/her goal set by him/her. Educational Aspiration depends on awareness about educational mobility, oppo1tunities and one's interest among known educational opportunities.

Socio-Economic Status:-

The term 'Socio-economic Status', we mean, any group of persons coming closer to each other on continuum of Occupation, Education, Income, Caste and Culture. Chapin (1928) has offered most widely used definition of Socio-economic Status as "the position that an individual or family occupies with reference to the prevailing average standards of cultural possessions, effective income, material possessions and participation in group activity of the community."

Soc10-economic status is often measured as a combination of education, income and occupation. 11 is wmmonly conceptualized as the sm:1al slam.ling or dass Of an individual or group.

One's social position is detennined by income, wealth, occupational prestige and educational attainment.

Socio-economic status is the total of a combination of a ?Crson work experience, income, education and occupation measured against others. There are high, middle and low categories.

Socio-economic status is evaluated as a combination of factors including income, level of education and occupation. It is a way of looking at how individuals or family's fit into society using econon11c and social measures that have been ;hown to impact individuals health and well being. (By 1::,LIZABETH BOSKEY. PhD updated Feb 06. 2009)

SANTROCK (2004) defines 'll as "the grouping of people\\ ith snmlar occupatIonal, educational and economical characterishc."

WOOL FOLK (2007) calls socio-econom1c status "the relative standing in society based on income, power, backgroun<1 and prestige".

Ilere rcscan;her take a tclm soc10-econom1c status because the soc10-econom1c status, family background Parental education han: the sigmtieant inllucnce on the educational aspirallon of the students. So, the present study had been taken lo assess and analyze the educational aspiration of students and rclat1onsh1p with socio-economic status which is responsible for the shaping of student's educational aspiration

15 OBJECTIVES OF THE STUDY

The present problem endcavors for the reall1ation of the following objectives.

- 1) To study the relationship between the Socio-Economic Status and Educational Aspirnt1on among higher secondary school students.
- 2) To study the relationship between Socw-Economic Status and Educational Asplratwn among girls.
- 3) To study the relationship between the Soc10-l::.conom1c Status and Educational Aspiration among boys.

16 HYPOTHESIS

Aculrdl11g 11, \louk) Co. I. .,\ h)l)Othc,1, i, ,1 tcntati\c gcncrali/at1on ahout the problem under 111\cstlgat111n. It is an assumption nl preposllwn. \(\text{v}\) hose tcnabiltt i. to

he tested on the basis of the compatibility of its implication ,, ith empirical c\idcnce and with previous knowledge".

To summarize, Hypotheses are suggested problems. Solutions which are expressed as generalized or preposition. The hypothest-s for the problems study are:-

- 1) There will be no significant dlffcrcnccbctwccn higher secondary school students of go\'emment and pri\'ate school in their Educational AspIratIon.
- "I) There \\II be no significant difference between higher secondary school students of government and private school in their Socio-Fconomic Status.
- J) There \\ll be no significant difforcnce between boys and girls of higher secondary school students in their Educational \splratwn.
- 4) fhorc will be no significant difference between boys and girls of higher secondary school students in their ">oc10-Econon11c Status.

17 DELIMITATION OF THE STUDY

- 1. oc10-Lconom1c Status and Eclucallonal Aspiration depends (m and influenced b-many focwr like psycho-socrnl. cultural, cconom1c. those factors are neither considered nor neutral11ed in this study. Therefore relallonsh1p that examines this study is limned on weak foundation. This is important hmltatio11 of the study.
- 2. The study was restricted to the higher secondary schools of Bhopal D1stnct.
- J. fhis study was delllllted to students studying in class IIth
- 4. This stud} was dehmItc<1 to 200:-tudents.
- 5. The study was restmited to four schools of Bhopal Dist.
- 6. The study was completed in the duration of IS days.

CHAPTER2 REVIEW OF RELATED LITERATURE

CHAPTER 2

REVIEW OF RELATED LITERATURE

21 INTRODUCTION

A research literature review is the effective evaluation of selected document on a research topic. A review may form on essential part of the research process or may constitute a research project itself.

In the context of a research thesis the literature review is a critical synthesis of previous research. The evaluation question and hypothesis logically to the research question and hypothesis.

In the context of a dissertation the literature review provides a balkground to the study being proposed.

22 RELATED STUDIES: INDIAN CONTEXT

The researcher present below some selected studies according to review of related literature as follow:

There were 13 studies of the impact of different variables related to ecology. personality etc. on the vocational or education preferences of students.

Bhardwaj (1978) investigated the impact of components of creativity and intelligence upon vocational interest of 240 college going students.

Kurnars (I98 I) studied the individual as well as collective impact of scif - esteem level of aspiration and de,iancy or ad descent girls on nsk-taking tendencies.

Mary John (1981) itimed at investigating the extent to which institutionalized adolescents differed from non-institut1onali1ed adolescents on a future tlllle perspective self-control and vocation interests.

Sharma (1982) attempted to relate adolescent's interest with personality factors Sex and anxiety.

Toong (1982) conducted a study on 1039 students of class a from urban higher secondary schools of three district headquarters of Punjah to find out the 111fluence of creativity personality. achle, ement and socio-economic status on ocauonal aspiration.

Bhatnagar (1983) ludled the extent of divergence het/vecn the 1H.:cupatwnal choices and vocauonal interests of adole cent girls and comparison were made an ong

different groups of girls students in occupational choices and factors influencing them, along with their interest.

Joshi (1983) studied the difference in the interests of higher secondary school pupils in relation to their parent's education socio-economic status location and personality traits. A factorial designs was formulated and analysis of variance was used for drawing conclusions. Different areas of interest rural and urban students were compared.

Tomar (1985) studied the occupational interest of adolescents in relation to sex, ruralurban residence, socio economic background and prevalent job trends of employment in eastern U.P.

Jain (1984) studied the development of interests among boys of the humanities, commerce and science streams belonging to mral and urban secondary schools.

Vijaylakshmi(1985) studied the occupational choices of women students and compared the groups of students offering sciences, arts, professional course and nonprofessional course.

Dabir (1986) tried to study how aptitudes motivation, socio-economic status and aspiration were related.

Das (1986) established a regression equation for academic acilievement with reference to intelligence, Socio-economic status, peer influence and <u>educational</u> aspirations for different sample groups.

Mehta eta) (1985) studied the effect of residential status and sex on level of occupational aspiration of adolescents and the relationship between socio-economic status, father's education, father's occupation, intelligence and scholastic achievement with level of occupational aspiration.

However, the findings of these studies arc conflicting and hence no conclusions can be drawn and generalizations made more studies of this kind arc required with larger samples and with greater spread on population to enable generalized conclusions.

Chaudhary (1971) investigated the relationships among achievement motivation anxiety intelligence sex, social cl s and vocational aspiration.

Gaur (1973) studied the factors affecting the occupational aspirations of secondary school students.

Chadha (1979) studied the relationsh1p among psyd10logical and ocial factors or , ocalional aspirations.

11chct's (1981) study was aimed al studying the relationship between

- (a) Vocational aspirations and intelligence
- (b) Intelligence le, el of the subJects and their father's education
- (c) Intelligence level of the subject and their father's occupations.

Chadha, S.S. A study of some psychological and social factors as related to 'vocational aspirations of rural and urban high school children.

Major finding of the study

- I) The urban boys aspired for engineering (48%), protective (11%) and health (10%) occupations whereas the rural boys aspired for teaching, welfare (43%) and engineering (36%) vocations.
- The aspirations of fathers for their sons maintained more or less a similar rank order.

Das, S peer incluence and educational aspiration of secondary school students. λ study in relation to their academic achievement. Ph. D. edu: MSU 1%6

lajor finding ofthe.sJugy

- I) [he education aspirat10n of students helonging to urban schools was higher than that of students of rural schools.
- 2) Students of the high soc10-cconomie status group had higher educational aspiration than students of the low socio-economic status group.

2.3 CONCLUSION OF REVIEW OF RELATED LITERATURE

In this chapter researcher organize the revie,, of related literature, rele\ant to thi: e<lucational aspiration and socio-economic status. Many review which have given, shows the relationship between educational uspiration and socio-economic status. Here seen that educational asplration as well as socio-economic status affects each other.

On the basis of above studies rest:an:her conclude that the present study makes to 111, estigate the relationsh Ip hetween educational aspiration and soc10-econom Ic status of higher secondary school student.

CHAPTER3 RESEARCH METHODLOGY

CHAPTER3

RESEARCH METHODLOGY

31 INTROOUCATION

To make the knowledge of social sciences, including education more scientific, objective, valid and authentic research work is becoming more and more popular and essential. Research work has to be carried out with some method. In fact, methodology plays the most dominant role in any research work or investigation. It alone leads to scientific and valid results that can be depended upon.

This chapter deals with the methods and procedure including sampling, selection of tool, pre-testing their rehab1hty and validity, data analysis and statistical techniques employed.

32 POPULATION

The population of the present research is the 11th cbss students of Bhopal city.

33 SAMPLE

The samples include four schools of Bhopal city of $11\,h$ class. Researchers select the schools randomly for the study.

For the present study, descriptive survey method is used.

34 VARIABLE UNDER STUDY

There are many variables which are important in research work. Variables of the present study arc:

- I) Socio-Economic Status
- 2) Educational Asplration

35 RESEARCH TOOLS

I) Socio-economic status

To study the soc10-economic status, researcher used soc10-economIc ,tatus scale (Urban) FOR\1 A and B by S. P. Kulshrestha.

The scale can be administered indi, idually or in group. The present scale contains 20 Items 111 statements. The grand total of the testee can be n1mposed 1ml classified the status of the subject. The reliabilit} of the scak was calculated b, the test-retet method. The wetfa:ient ur correlation was found equal in 0.87. The

validity of the scalt- was also calculated by companing the scale with Dr. Kuppuswami's and Pandey's socio-economic status questionnaire. The coefficient of correlation were found equal to 0.57 and 0.89 respectively.

2) Educational aspiration scale

For educational aspiration, educational aspiration scale (EAS) FORM P by Dr. V. P. Shanna and Dr. (KM) Anuradha Gupta is used for the purpose of the study and statistical treatment of data.

Dr. V. P. Shanna and Dr. (KM) Anuradha Gupta's educational aspiration scale for student is in objectively scoreable test constructed to find out the level of educational aspiration. The scale can be administered indi\1dually or 111 group. There is no time 111nit. however it takes about 25 mintues to administer the whole scale to complete 11. Its coefficient of stability by Test-Retest method-- rtt = 0.98.

Coefficient of internal 1.:ons1stency by odd-even technique using S-13 fomrnla---ntt = 0.803. Its validity (a) Against scholastit: Achievement (Board Exam.) r=0.692(b) Prcdlctlvc validity with EAS, FORM V------ r=0.5%

3.6 DATA COLLECTIONPROCEDURE AND ADMINISTRATION

The researcher herself collected all the data from the subJects included in the sample. Prior lo administering a test, the subjects were acquainted with the purpose of the tests. This was done to establish rapport and to make them foel easy. They were also infonned of the general nature and purpose of each test. They were assured that the information collected from lihem would be kept confidential. This was done to motivate the subjects to take the test with easy and to give true responses without any fear and anxiety.

"fhe language used by the test administrator in giving 111structions to the subjects was as simple as possible, so that each subject was to understand clearly what was required by the researcher.

First of all, they were asked to fill about their infonnation on the test booklet. Then they wen: given the instructions. Which were printed on the cover page. Also they were as J. ed to read the instructions themselves. When the test administrator was confident that everything was made clear to the tudents. they were asked to start the look. Then they were asked to start the look. The lilled test bno. Lets a look of the sub-let.

booklets were scored accordance with the procedure mentioned in the test manual. The data so obtained were subjected to statistical treatment.

3.7 STATISTICAL TECHNIQUE USED

It is important for a researcher to dra, logical inferences regarding the ability of hi. T testable hypotheses. The utility of any research work is judged by the acceptance or rejection of these hypotheses. Statistical treatment was given to the data to test the hypotheses. The following statistical operations were used for the analysis of the data. fo examine the relallonsh Ip between the EA and SES. Correlation-Coefficient is drawn. For testing hypothesis Mean. SD and T-test is dra,\n.

CHAPTER4 DATA ANALYSIS AND INTERPRETATION

CHAPTER4

DATA ANALYSIS AND INTERPRETATION

4.1 INTRODUCTION

In the ftrsl chapter problem was stated, objectives were formulated and limitations were spelt out. In the second chapter, brief review of research work was considered. In the third chapter, the methodology of the present work was described. In this fourth chapter researcher presents data analysis and interprets them.

Analysis of research data is an important step in the dissertation process. This is the time a researcher may reach important facts about the data collected, uncover facts that one might not otherwise have known. Assuming the need to analyse the data collected from the sun cy, the process begins with a quick review of the results, followed by analysis and reporting.

42 DATA BASE

The data is collected Fron, the following two government schools and two pnin1te schools of Bhopal. The schools selected for the study arc as follows.

				_	-

43 DATA ANALYSIS AND INTERPRETATION

The present study :umed toknow the relationship betv,een socio-econom1c status and educational aspiration of l.igher secondary school students. ObJcc!lve of this study as follows-

Section' A': Results pertaining to Relationship

(1) To study the rcla11onsh1p between the soc10-economic status and educationalasp1ration among higher secondary c;chool students.

Hypothesis: There is no significant relationship between Soc10-Econonuc Status and F.ducattonal Asp1rat1on.

Interpretation

Table 4.'\sho," that the , aluc of r is 0.!) I 11 It indicates a positi\'C com.:lation. Here table 4.3 show that calculated value($0.0\,133$)1s less than table value(1.97) flus indicates J s1gnilic,1nt pos11tve correlat1on.

On the basis of above, it can be concluded that, Iducational Aspiration is pos111vely correlated with Socio-Economic Status of students. Having seen the relationship between , ariabks on total sample, the researcher intends to see the relationship among girls and boys separately.

(2) To study the relationship between Social-Economic Status and Educational Aspiration among girls.

Hypothesis: There-1s no significant relationship between Socio-Economic Status and Education Aspiration among girls.

Table 4.4

	N	Mean	r-value
Socio-Economic Status	167	97.57	0.1027
Educational Aspiration		21.78	

Interpretation

fable 4.4 show that the value of r 1s 0. IO27. It indicates that there is a positive correlation. fhat means high scores on one variable (SES) tend to be associated with high scores on the other, an able (LA) and vice ,ersa.

(3) To study the relationsh1p between Soc10-Econom1c Status and Educational Aspiration among boys.

Hypothesis: There is no significant relationship between Socio-Economic Status and Educational Aspiration among boys

Table 4.5

	N	Mean	,-va:J
Socio-Economic Status	33	129.39	-0.0063
Educational Aspiration		19.97	

Interpretation

fable 4.5 show that the value of r is -0.0063. It indicates that there is a negati, c co1Telation. That means high scores on one variable (SES) arc associated with Important scores on the other variable (EA) and , ice versa.

Section 'B': Results pertaining to Demographic variables

Objective: To study the difference between higher secondary school students of government and private school in Educational Aspiration

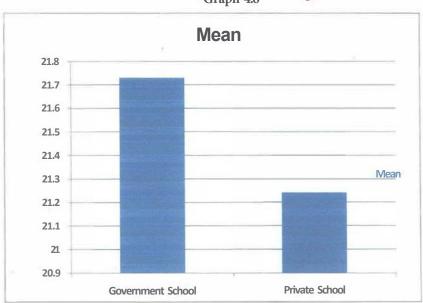

Hypothesis (Ho 1): There will be no significant difference between higher secondary school students of Government and Private school in Educational Aspiration.

Table 4.6

Comparison of mean score of government and private school students

	N	Mean	SD	t-value
Government School	100	21.73	4.69	0.46
Private School		21.24	4.98	df=98

Graph 4.6 (jJ- 42B

Interpretation

Table 4.3.3 shows that the calculated t-value (0.46) is less than the table value (1.98) at 0.05 level with 98 df, so it is no significant. Thus null hypothesis stated that there is no significant difference between EA of the government and private schools is accepted.

Objective: To study the difference between higher secondary school students of government and private school in Socio-Economic Status.

Hypothesis (Ho 2): There will be no significant difference between higher secondary school students of government and private school in socio-economic status.

Table 47 Comparison of Mean score of Socio-Economic Status of gonmment and private school student,

Group	N	Mean	SD	t-value
Government School	100	81.76	25.23	8.17
Private School		123.88	45.00	df-98

Mean 140 120 100 80 Mean 60 40 20 0 **Government School** Private School

Graph 47

interpretation

Table 4.7 show that the calculated t-value (8.17) is higher than the table value (2.63) at 0.01 level with 98 df, so it is significant Thus null hypothesis which stated that there is no significant difference between Socio-Economic Status of government and private schools is rejected.

Objective: To study the difference between boys and girls of higher secondary school students in their Socio-Economic Status.

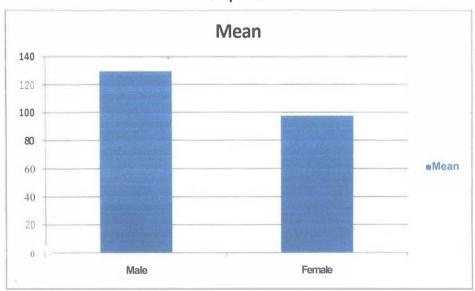

Hypothesis (Ho 4): There will be no significat difference between boys and girls of higher secondary school students in their Socio-Economic Status.

Table 49

Comparison of mean score of Socio-Economic Status of Boys and Girls

Gender	N	Mean	SD	df	t-value
Boys	33	129.39	41.69	198	4.07
Girls	167	97.57	40.24		

Graph 4.9

Interpretation

Table 4.9 shows that the calculated t-value (4.07) is higher than the table value (2.60). Thus null hypothesis which stated that there is no significant difference between Socio-Economic Status of higher secondary school students is rejected.

Objective: To study the difference between boys and girls of higher secondary school students in Educational Aspiration.

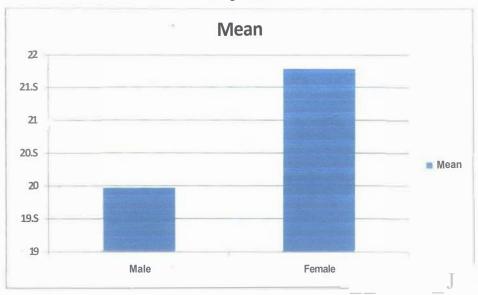

Hypothesis (Ho 3): There will be no significant difference between boys and girls of higher secondary school students in Educational Aspiration.

Table 4.8

Comparison of mean score of Educational Aspiration of Boys and Girls

N	Mean	SD	Of	t-value
33	19.97	5.45	198	2.48
167	21.78	4.67		
		33 19.97	33 19.97 5.45	33 19.97 5.45 198

Graph 4.8

Interpretation

Table 4.8 shows that the significant difference in the mean score of educational aspiration of two variables. The t-value (2.48) was not $si_{g\,n}$ if cant at 0.01 level, so null $h_{y\,p\,o}$ thesis is accepted.

CHAPTERS SUMMARY, MAJOR FINDINGS AND CONCLUSION

CHAPTERS

SUMMARY, MAJOR FINDINGS AND CONCLUSION

51 SUMMARY

Educational aspiration and socio-economic status plays important roles in education. Students with high educational aspirations are more do well in school regarding students with low educational aspiration. Student's educational aspirations as well as socio-economic status effects on their achievement. Socio-economic status positively affects the student's education aspiration.

rhis chapter deals w11h summary of research work and data analysis of chapter 4 and conelus1on.

52 STATEMENTOFTHE PROBLEM

The study deal with the relationship between socio-economic statu-; and educational aspiratkm among higher secondary school student. Thus the problem may be stated as:

RI::.LATIONSHIP BETWEEN SOCIO-EC'ONO\IIIC STATUS AND EDUCATION ASPIRATION AMONG HIGHER SECONDARY SCHOOL STUDENT – A STUDY

53 OBJECTIVE OF THE STUDY

- To study the relationship between the Socio-Economic Status and Educational Asp1rat1on among higher secondary school students.
- To study the relationship between the Soc10-Eco11l'mic Status and Educational Aspiration among girls.
- ... To study the relationship between the Socio-Economic ">talus and Educational Aspiration among boys.

54 HYPOTHESIS

- fhere will be no significant difference between highter second.tr) school students or go, criment and private so;hool illticir Educnti()nal \spliration.
- ". Ihen: "111he no s1gndican1 ditfcn.:ncc hctwel:n h1ghlr Sl'Condar school students ot gtn crnment and private school in their C.oci11-h:onu111ic Status.

- There will be no significant difference between boys and girls of higher secondary school students in their Educational Aspiration.
- There will be no significant difference between boys and girls of higher seuindary school students in their Socio-Economic Status.

55 DELIMITATION OF THE STUDY

- The study was rt.-stricted to the higher secondary schools of Bhopal District.
- This study \\as dehmited to students studying in class 11th.
- Thb study \\Js delimited to 200 students.
- , The study was restricted to four schools of Bhopal Dist.
- , The study was completed in the duration of 15 days.

56 \ARI\BLES

- , So1..10-Econom1c Status
- ; 1::ducational Asp1ratwn

57 RESEARCH METHOD

, Descriptne sul"\e:, method

58 SAMPLE OF THE STUDY

The samples 111clude four school **or** Bhopal city of IIth class. Researche1's select the school randoml} for the study.

59 roots used for data collection

- , S0cw-Econom1c Status scale (urban) FORM A :ind B by P Kulshn:stha.
- , 1::luLational ,\sp1ratwn scale rORM P by Dr. \/. P. Shanna and Dr. (KM) ,\nur,1dh:i Gupta.

5.10 PROCEDURE FOR DATA \ NAL\'SIS

Data Is analyled \\Th the help of scurces of !!ata from the selected schools. To L'\lmilw the !clat!unsh!p bet\\ccn the \OL111-h:111111mlL \t,!lus ('-,!\) ;md Education Aspiration Lale (E\S). (*onclat! I*n-Codlic!1::111 h dr.t\\n. for te,! lng h pothe, is :\lean. \f) and *I-te,t 1, dn!\\n.

5.11 MAJOR FINDINGS OF THE STUDY

Relationship: Pertaining to Relationship

- Y A positive correlation between tile socio-economic status and educational aspiration among higher secondary schools students.
- A positive correlation between Socio-Economic Status and Educational Aspiration among girls.
- A negative correlation between Socio-Economic Status and Educational Aspiration among boys.

Difference: Pertaining to Demographic variables

- Difference between higher secondary school students of government and private school in Educational Aspiration is not significant.
- Difference between higher secondary school students of government and pm-ate school in Soc10-Econom1c Status Is significant.
- , Difference between boys and girls of higher sccondar) school students in Fducat1onal Aspiration is not significant.
- ", Difference between boys and girls of higher secondary school students in their Socio-Economic Status is significant.

5.12 SUGGESTIONS FOR FURTHER RESEARCH STUDIES

- ". This study may further extended in increasing sample size.
- This study may further extended to secondary school and college students.
- This study may further extended in rural schools, residential schools, welfare schools and special schools.
- This study may further extended by taking variables like age, gender, medium of instruction.
- ". A study may further conducted to measure the influence on student personality.

5.13 CONCLUSION

The primary goal of this study was to contribute to our understanding dr J.ncm ledge of the Socio-Economic Status and Educational Aspiration of the studenb. notes study deals with re!Jtlonhlp between Soc10-Economic Status and Educational Aspirational among higher second try school students as \\di ls they affects each other.
